

## Informal Confidence Intervals

Based on the informal confidence intervals the median of lengths of armspan of Yr12 boys will lie between 176cm and 184cm and the median of lengths of index fingers of Yr12 girls will lie between 163cm and 171cm approximately in 9 out of 10 samples.

As these two informal confidence intervals do not overlap, I can make the call that armspan of Yr12 boys tend to be greater armspan of Yr12 girls back in the two populations
